Looks OK but Wood County did not request the additional air monitoring/sampling. WVDEP requested the additional monitoring.

Also ATSDR providing public health consultation on data being collected by the Wood County consultant. EPA assisting Wood County on interpretation of data with ATSDR

OSC Debbie Lindsey reports that Wood County has requested additional EPA assistance for air monitoring and for communications, specifically assistance in their Joint Information Center (JIC). For the air monitoring, today the Environmental Response Team (ERT) delivered additional data rams and the Regional office is sending three E-BAM particular monitors. Region 3 has also deployed our WV congressional liaison to the County's JIC.

OSC Chris Wagner will arrive this evening and OSC Dennis Matlock will arrive in the morning to provide additional EPA staff to the response. There are also 4 EPA contractors to place the air monitors and collect the data. In addition, OSC Glen Lapsley is coordinating with ATSDR in the Regional office to health data to the county.
